Office Action Summary

Application No.

09/635,988

Applicant(s)

BROWN ET AL.

Examiner

Hussein A. El-chanti

Art Unit

2157

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 June 2005.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 9-15, 26, 27, 31, 34 and 37 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 9-15, 26-27, 31, 34 and 37 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
 - ☐ Certified copies of the priority documents have been received in Application No. _____.
 - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Response to Amendment

1. This action is responsive to amendment received on June 21, 2005. Claims 9-15, 26-27, 31, 34 and 37 are pending examination.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 9-15, 26-27, 31, 34 and 37 are rejected under 35 U.S.C. 102(b) as being anticipated by Esaki et al., U.S. patent No. 5,132,964 (referred to hereafter as Esaki).

Esaki teaches the method explicitly as claimed including temporarily storing the data packets sent from the input modules and for generating and sending a dummy packet to the communication channel when the amount of the data packets temporarily stored therein exceeds a predetermined threshold value (see abstract).

As to claims 9, 31 and 34, Esaki teaches a method, computer readable medium and apparatus for facilitating speedy communication of packets between entities on a network, the method comprising:

sending a set of packets from a sending entity to a receiving entity, wherein a transmission delay between packets in the set is intolerable (see col. 3 lines 30-41, packets are sent to input modules where contention is being monitored);

immediately thereafter, sending at least one "push" packet to avert a transmission delay between packets in the set, wherein the delay is caused by packet

Art Unit: 2157

buffering of a communication device on the network (see col. 3 lines 40-55, when a possible contention is detected, a dummy "push" packet is transmitted to avoid buffer overflow).

As to claim 26, Esaki teaches a method for facilitating bandwidth measurement between two entities on a network, the method comprising:

sending a pair of bandwidth-measurement packets from a sending entity to a receiving entity, wherein a transmission delay between packets in the pair is intolerable (see col. 3 lines 30-41, packets are sent to input modules where contention is being monitored);

immediately thereafter, sending at least one "push" packet to avert a transmission delay between packets in the pair, wherein the delay is caused by packet buffering of a communication device on the network (see col. 3 lines 40-55, when a possible contention is detected, a dummy "push" packet is transmitted).

As to claim 15, Gunninberg teaches a computer-readable medium having computer executable instructions that, when executed by a computer, performs the method as recited in claim 9 (see the rejection of claim 9).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Esaki.

Art Unit: 2157

Esaki teaches a method comprising sending a set of packets from a sending entity to a receiving entity, wherein a transmission delay between packets in the set is intolerable (see col. 9 lines 27-42); and immediately thereafter, sending at least one "push" packet to avert a transmission delay between packets in the set, wherein the delay is caused by packet buffering of a communication device on the network (see col. 9 lines 43-63).

Esaki does not explicitly teach the communication device is a proxy server. Official notice is taken as evident by Microsoft Computer Dictionary that one of the ordinary skill in the art at the time of the invention would perform bandwidth measurement on a proxy server because using a proxy server can improve performance by supplying frequently requested data and discard inappropriate requests.

4. Claims 10, 11, 13-15, 27 and 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Esaki in view of Gunninberg.

As to claim 10, Esaki teaches a method, computer readable medium and apparatus for facilitating speedy communication of packets between entities on a network, the method comprising sending a set of packets from a sending entity to a receiving entity, and immediately thereafter, sending at least one "push" packet to avert a transmission delay between packets in the set.

Esaki does not explicitly teach the limitation "two packets sent back-to-back". However Gunninberg teaches a method of determining a connection bandwidth by

sending back-to-back packets, and considering the delays and congestion situations that occurs on a server (see Page 413).

It would have been obvious for one of the ordinary skill in the art at the time of the invention to modify Esaki by sending back to back packets to determine a bandwidth of a connection as taught by Gunninberg because doing so would allow the system to evaluate the bandwidth more accurately by taking multiple values for the bandwidth and averaging the results.

As to claim 11, Gunninberg teaches a method as recited in claim 9, wherein the set of packets are bandwidth-measurement packets for measuring bandwidth between the sending entity and the receiving entity (see Page 413).

As to claim 13, Gunninberg teaches a method as recited in claim 9, wherein the network is TCP (see Page 413).

As to claim 14, Gunninberg teaches a program module having computer-executable instructions that, when executed by a computer, performs the method as recited in claim 9 at an application layer in accordance with an OSI model (see Page 413).

As to claim 27, Gunninberg teaches a method as recited in claim 26 further comprising receiving a bandwidth calculation based upon measurements related to the pair of packets (see Page 413).

As to claim 37, Gunninberg teaches a modulated data signal having data fields encoded thereon transmitted over a communications channel, comprising:

a field including a "push" packet facilitating minimization of to transmission delay between the first and second packets, wherein the delay is caused by packet buffering of a communication device on the network (see col. 3 lines 30-55).

Esaki does not explicitly teach the limitation "two packets sent back-to-back". However Gunninberg teaches a method of determining a connection bandwidth by sending back-to-back packets, and considering the delays and congestion situations that occurs on a server (see Page 413).

It would have been obvious for one of the ordinary skill in the art at the time of the invention to modify Esaki by sending back to back packets to determine a bandwidth of a connection as taught by Gunninberg because doing so would allow the system to evaluate the bandwidth more accurately by taking multiple values for the bandwidth and averaging the results.

Response to Arguments

4. Applicant's arguments have been fully considered but they are not persuasive.

In substance, applicant argues that Esaki does not disclose sending at least one "push" packet to avert a transmission delay between packets in the set, wherein the delay is caused by packet buffering of a communication device on the network.

In response, Esaki teaches a system and method of sending a plurality of packets and sending thereafter dummy packet "push packet" creating contention of in the queue. However Esaki also teaches that the dummy packet is sent to avoid overflow in the buffer and resulting in the discarding of the packets (see col. 11 lines 55-col. 12 lines 2). There is no limitation in the claim on the type of the delay between packets and

therefore examiner broadly interprets the delay to be the buffer overflow taught by Esaki wherein the overflow is caused by the packet buffering on the communication device. Therefore Esaki's sending of dummy packets to avoid buffer overflow meets the scope of the claimed limitation "sending at least one "push" packet to avert a transmission delay between packets in the set, wherein the delay is caused by packet buffering of a communication device on the network".

5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hussein A. El-chanti whose telephone number is (571)272-3999. The examiner can normally be reached on Mon-Fri 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ario Etienne can be reached on (571)272-4001. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
